ABOUT US

Polarshark Productions is currently an up-and-coming photography and videography business. With not too much experience so far in the field but working hard to see results. Our focus is to be able to expand the company over more social media platforms. As well as expanding our staff to be able to take on more project!

Responsive Web Design II

Sierra Agnesi

Creating a web portfolio for my company Polarshark, a three-page website to start. A homepage, a contact page, and a photography services page. To start building any website with VS code I want to make sure it is organized which makes adding more content to each page easier. I start by creating a file for each page index.html, photography.html, and contact.html. Building a base for each page and building off of that. With the header and footer being the same on each page I create those for each page and then work on making each page individually. The biggest challenge that I face was being about to go back through my code to look for mistakes that need to be fixed. Having to work off of three different files and one CSS file can make it difficult to navigate through. I leave a lot of comments to be able to easily go back to my code and make changes. I am still working on getting faster at creating code, with this project I was able to work on developing my skills to improve. I got to work again with the CSS grid and got to work with Bootstrap. Overall the website came together to be quite closer to the original mockup and shows what the style would be for the Polarshark website.
